

BULLETIN NO. 24/25-003 DATE: 21 Aug 24

TO: All ISR Drag Race Affiliates

SUBJECT: Fuel in Pro Mod Class on Grass and Ice.

Fuel in Pro Mod Class on Grass and Ice.

ISR will be rescinding the fuel ruling for the Pro Mod Class on Grass and Ice, for the balance of the 2024-2025 season. Pro Mod will not be allowed to run Oxygenated fuels. (Only Pro 55 and Outlaw)

The matter was discussed at the Spring rules meeting and was part of the process of establishing parity among drag racing and speed run affiliates. Many issues were discussed and approved to ensure that the top-level classes structure and rules were to be uniform in all affiliate's events.

However, the July notification of the rule implementation has not allowed many competitors ample time to add the additional equipment required to change out the fuel delivery systems between classes, and in many cases proper test time has not been scheduled.

(This was my fault as we missed it in the June posting.)

In light of this, and in the best interest of the Sport, Pro Mod for Grass and Ice will revert to the 2023 and 2024 fuel rules for the class. This matter will again be on the Spring rules meeting agenda for 2025 season and will be contingent on the final vote of the affiliates involved.
